Developerworks - FREE Tools!

Achieving Predictability and Quality in Business-Critical Software Application Deployments

Learn techniques, strategies and tools for analyzing, validating, and ensuring the quality and scalability of your business systems before they go-live. Learn how automating test execution and team communication can free testers from low-value tasks and allow them to focus on uncovering the complex and often hidden flaws that can derail successful software deployments. You'll also discover how integrating test and validation activities with upstream development and downstream IT operations can provide you the ability to more effectively govern the full life-cycle of software projects. Register for this on demand webcast today:

Making the Most of Eclipse

During this briefing, you'll get an introduction to Eclipse, the foundation behind it and a little about the platform's architecture. Over the last five years, one of the most significant breakthroughs in the world of Java™ development has been Eclipse. Donated to the open source community by IBM in 2001, Eclipse has since grown to be an independent project endorsed by over 100 software companies worldwide, including industry leaders such as Oracle, BEA and Macromedia.
